

A Modern Fire for your Modern World

## *Halcyon Direct Vent Gas Fireplace*

Malden, MA – March 30, 2009: The Halcyon Direct Vent Gas Fireplace is the latest offering to European Home's line-up of modern gas fireplaces.

The Halcyon fireplace is a direct vent gas fireplace showing a long linear firebox. With an opening height of just 12¾", the Halcyon is a very low profile gas fireplace. The opening width is a dramatic 49" and the framing depth is just 18½". When asked why this fireplace is unique, owner Holly Markham states "The market is clearly moving in a contemporary direction. More and more homeowners, decorators and architects are requesting clean lines and minimalist designs." The Halcyon offers the clean lines of modern without being overly designed. The beauty is in the simplicity.

In addition to the Halcyon's beauty, European Home is proud to have made the Halcyon fireplace energy efficient. By adding in optional ducting, a home owner can run the heat from Halcyon into other rooms, thereby utilizing the heat from the fireplace in other parts of the house.

The Halcyon fireplace is offered with stainless steel, black enamel, or white stone-like interior panels as well as a choice of fire media including: Crushed Glass, Crushed Dover Stone, Dover Stones, and Dover Stones with Logs.

European Home gas fireplaces are available throughout the US and Canada through selected fireplace showrooms.
