About..... 18

All models are designed and
manufactured in the U.S.A. 

“Quality is the pride
of workmanship”

– W. Edward Deming

designed by R+B Design Architecture, built by Wadleigh and Associates

H Series

This vent-free gas fireplace features a contemporary, trimless, open front style and is designed with simplicity in mind. The increasing desirability of vent-free gas fireplaces are growing in popularity for several reasons:

1. **Zero Clearance:** The term “zero clearance” means another layer of convenience and versatility. It allows the fireplace to be installed in close proximity to combustible materials such as walls, wood framing, or furniture without posing a hazard.
2. **Vent-Free Technology:** Without the need for complex venting systems, installation is straightforward, allowing for more flexible placement in homes and commercial spaces. This means vent-free options a more affordable choice for homeowners and builders.
3. **High Efficiency:** Vent-free gas fireplaces are known for their high efficiency. Since there’s no chimney or flue, heat is retained within the room,

making the fireplace 99% efficient. This translates to cost savings on your gas utility bills.

4. **Versatile Placement:** This installation flexibility makes vent-free fireplaces a convenient and attractive option for homeowners seeking to add warmth and style without the hassle of complex construction. This adds simplicity for multiple rooms, space-conscious homes, as well as renovations and remodels

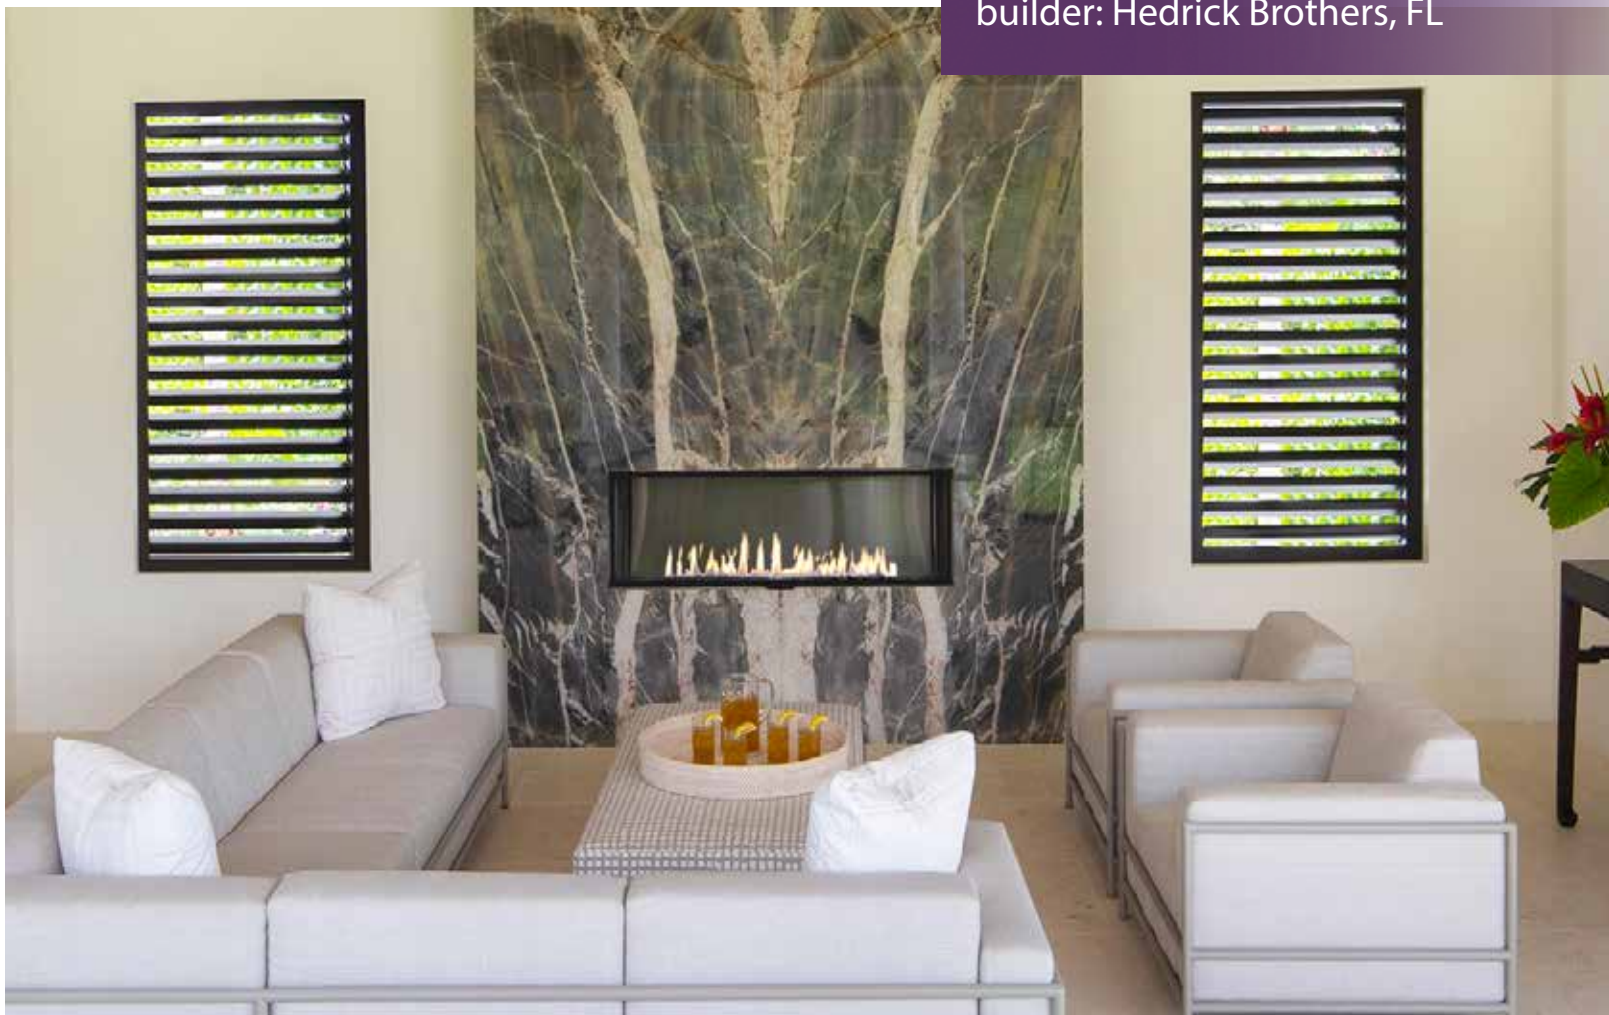

The combination of ease of installation, energy efficiency, and contemporary style has made H Series vent-free fireplaces a popular choice in the market.

G Series

Looking for a custom design? If you wish to take some extra steps the G Series linear gas burner provides a way to achieve the look of a custom fireplace with the flexibility of an approved dual listed vented and vent-free natural gas burner. This burner can be used in an existing fireplace or in a listed firebox such as Earthcore/Isokern.

The G Series is available in three sizes as a drop in burner (shown above) or with the optional burner cover (shown below). The optional cover is useful for floor level installation because it hides away the controls and burner structure to provide a clean, modern aesthetic. If you are looking for something easier, check out our H Series (pages 10 - 13). They are the same burner as the G Series however they are already integrated with a zero clearance firebox.

Gas Stones

For use in a wood burning fireplace or UL listed firebox, our Gas Stones eliminate the “log” look of traditional gas log sets and fireplace inserts. Clean, contemporary and thoroughly modern. If you are looking for a modern alternative to gas logs, this is it. This minimalist design will provide you with a

calming, uncluttered presence in your fireplace for years to come.

Beautiful stones and driftwood crafted from fireproof ceramic sit atop a steel cover fully concealing the gas burner and controls. The burner cover is available in white or black and in two sizes.

About Us

At *European Home*, beautiful design drives everything we do. Founder, Holly Markham, evolved her business into fireplaces by understanding design needs. Because of that dedication we now design, manufacture, and import the highest quality modern fireplaces. From the materials we use, to the efficiency standards we hold, to the skilled hands and innovative minds behind every product – **every detail is considered completely.**

All European Home gas fireplaces are manufactured in the United States and are certified for use in North America.* In addition, European Home is the exclusive importer of the European brands Flamerite Fires and Focus.

**Some restrictions apply for vent-free products. Check your local guidelines.*
