

EUROPA / CAPELLA FITTING INSTRUCTIONS

1. Remove the fire and suite from their packaging.
The fixings for the fire are stapled to the inside of the Europa Suite.
2. **Make sure the power cable is installed before fitting the fire.**
Slide the fire in from the back of the suite, carefully aligning the two.
Check everything is aligned and central before the next step. (Image 1)
3. Use all 8 fixings, and screw the fire into position, using the holes circled in red below. Do not overtighten the screws, as this will damage the wood. Do not use other fixings. (Image 2)
4. Use the fire instructions to set up fuel bed and logs for the fire. You can then plug the suite in.
5. Now the fire is fully set up, refer to the operating instruction to use the fire.
